

PAST

Onboarding Logbook

Project -

Secondary Flight Storage

Rory Cook

rory@morpheus.ws

Onboarding Session 1 -

18th of March 2026

Tasks Completed :

- Selected onboarding project
- Created logbook design

Goals for Next Time:

- Learn basics of Altium designer
- Select a microcontroller
- Select a storage technology/module

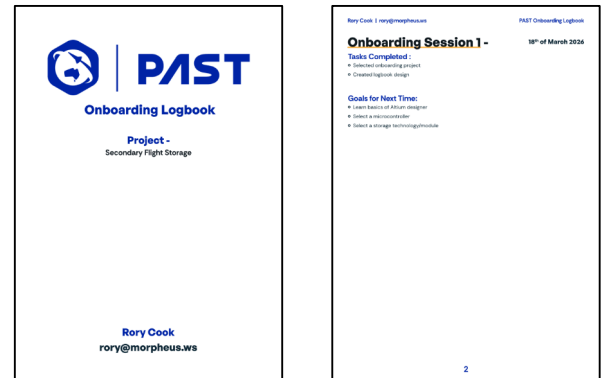

Figure 1: Logbook Design

Onboarding Session 2 -

25th of March 2026

Tasks Completed :

- Created git repo for my work
- Began creating research document
- Defined requirements
- Researched different flash storage topologies (NAND & NOR)
- Selected an IC to be used for the project (Infineon S25HL512TDPNH1010)
- Chose a microcontroller (ESP32-S3-WROOM-1U)

Goals for Next Time:

- Read important info from datasheets
- Begin PCB design
- Learn how to use git with altium for version control

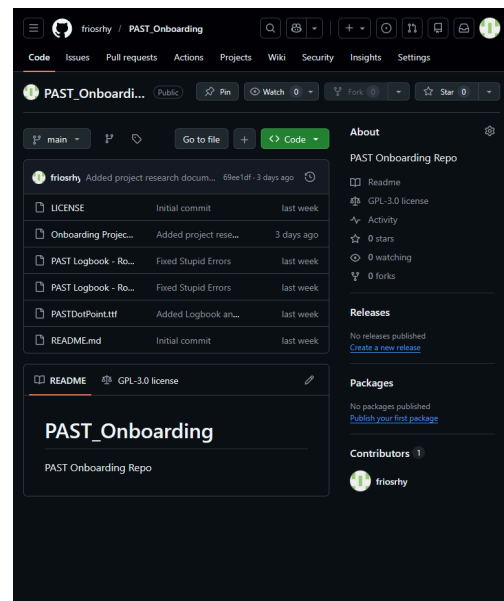

Figure 2: Github Repo

Onboarding Session 3 -

1st of April 2026

Tasks Completed :

- Finished initial schematic of project
- Started research on PCB layout best practices and how to ensure signal integrity.

Goals for Next Time:

- Make changes to schematic based on feedback
- Start learning how to do SPICE and electrical checks in altium

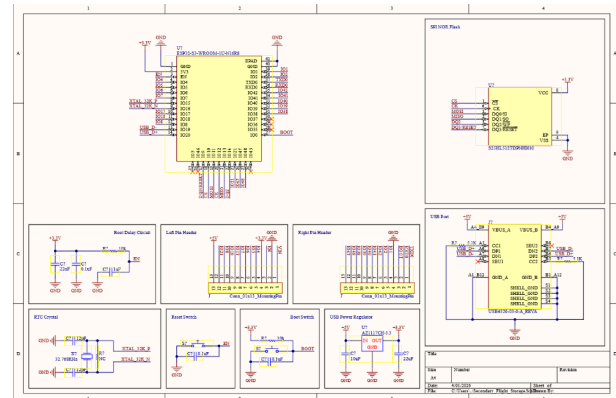

Figure 2: Initial schematic
